## Parallel Session B2 - City Academy - Accommodating Urban Growth

09:40 – 17:00	<p>The purpose of this module is to address the challenges of both urban growth and climate change and provide insight on how to design the cities of the future. Between 2020-2050, the urban population in the Global South is expected to increase from 3.4 to 5.5 billion in cities. This means that there is an ever-growing population that needs to be housed, have access to basic quality services and economic opportunities, enjoy a decent quality of life and become resilient to climate change. The way we will accommodate this urban growth will have a significant impact on cities. The urban form adopted by a city now will lock it into either a productive, inclusive and sustainable future or one that is inefficient and energy-intensive, thereby compromising goals to limit greenhouse gas emissions.</p>
